

At the forefront of the grid transformation

Westwood is uniquely qualified to assist with your energy storage facilities whether deployed as a stand-alone resource, paired with renewables, or part of a microgrid. Our multi-disciplined team leverages Westwood's 20+ years in renewables and nearly 50 years in commercial land development. We understand the heaviest lift within an emerging market is often educating stakeholders. Our resume includes both DC- and AC-coupled projects as well as containerized and building-based systems.
